## ORAL PRESENTATION

08 de outubro de 2026

### Oral presentation schedule – October 15, 2026, from 4:45 PM to 6:45 PM:

| Time    | ID   | Title                                                                                                                                                                      | Thematic Area                                 | Author/Presenter                            |
|---------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------|---------------------------------------------|
| 4:45 PM | 1064 | Comprehensive nanoformulation development of a therapeutic monoclonal antibody for lung delivery                                                                           | Nanotechnology                                | Douglas                                     |
| 5:00 PM | 839  | The effect of ozonized olive oil on tyrosinase inhibition, antioxidant activity, and skin retention of a microemulsion containing kojic acid for the management of melasma | Pharmaceutical and Cosmetic Technology        | Arthur Oliveira Fieto Amancio               |
| 5:15 PM | 809  | Generative AI versus pharmacy students in simplifying patient information leaflets: a readability comparison                                                               | Pharmaceutical Care and Assistance            | Henrique Damasceno Rodrigues                |
| 5:30 PM | 944  | Antibacterial effects of synthetic analogs of the TsAP-2 antimicrobial peptide                                                                                             | Biotechnology and Food Sciences               | Raiça Dominique Mariana Gomes da Costa Braz |
| 5:45 PM | 763  | An integrated artificial intelligence and structure-based drug discovery pipeline for the identification of multitarget Plasmodium kinase inhibitors                       | Medicinal/Pharmaceutical Chemistry            | Melina Mottin                               |
| 6:00 PM | 981  | Population pharmacokinetic modeling and target attainment simulations of a novel drug candidate for canine leishmaniasis                                                   | Pharmacology, Pharmacokinetics and Toxicology | Flávia Elizabete Guerra Teixeira            |
| 6:15 PM | 640  | Development of an analytical GC/MS method for fingerprint analysis of the Tisth peptide                                                                                    | Quality Assurance and Analytical Chemistry    | Bianca Farias Felipe                        |
| 6:30 PM | 1017 | Use of dereplication in the discovery of chemical entities with antifungal potential from a Streptomyces abduflavus extract                                                | Natural Products and Bioeconomy               | Francisca Maria da Silva Neta               |
